## SUMMARY

---

Backend Developer with a foundation in Software Architecture, System Design, and Security best practices. Proficient in engineering scalable RESTful APIs using C#, .NET Core, and ASP.NET Core, with hands-on experience building full-stack applications in Node.js ecosystems. Passionate about writing clean, maintainable code using SOLID principles and Clean Architecture. Framework-agnostic and highly adaptable, I am ready to leverage diverse modern technologies to build resilient, secure backend systems aligned with enterprise needs.

## SKILLS

---

- **Domain Skills:** Software Architecture, Clean Architecture & SOLID Principles, System Design & Scalability, Application Security & Robust Authentication, Microservices, Database Optimization
- **Technical Skills:** C#, JavaScript, TypeScript, SQL, .NET Core, ASP.NET Core Web API, MVC, Razor Pages, Node.js, Express, LINQ., Entity Framework, Angular, React, SQL Server, MongoDB, Git, GitHub, REST APIs, Docker, Jwt
- **Soft Skills:** Problem-Solving & Analytical Thinking, Framework Adaptability, Collaborative Engineering, Continuous Learning, Technical Communication

## WORK EXPERIENCE

---

### Backend Developer Intern

March 2026 - May 2026

Syntecxhub

- Engineered scalable RESTful APIs utilizing C# and ASP.NET Core Web API architectures.

Implemented production-grade backend patterns including server-side pagination, dynamic sorting, and multi-field filtering algorithms. Architected a secure authentication infrastructure with JWT validation, handling registration/login workflows and granular role-based access control (RBAC).

### MEAN Stack Trainee

June 2026 - August 2026

National Telecommunication Institute (NTI)

- Completed intensive, hands-on training focusing on full-stack JavaScript/TypeScript development within MEAN/MERN architectures.

Built highly responsive enterprise data tables integrated with flexible CRUD operations, custom sorting, and dynamic collection filtering. Designed strict authorization and privilege-checking mechanisms backed by optimized MongoDB database schemas.

## EDUCATION

---

### Faculty of Computers and Information

*Bachelor of Computer Science* October 2023 - July 2027 Acquired a rigorous academic foundation in Software Engineering methodologies, advanced data structures, and analysis of algorithms. Studied foundational computing principles including Operating Systems, computer communication networks, and distributed systems architecture. Explored system vulnerabilities, cryptography, and modern application security practices.

## PROJECTS

---

### Employee Management System

Developed an enterprise MERN/MEAN stack platform for corporate headcount and attendance management, featuring cascade removals via Mongoose pre-hooks, timezone-safe logging, and automated payroll reporting pipelines. (Stack: Node.js, Express, MongoDB, Mongoose, Angular)

### **Store MvcSn — Enterprise E-commerce**

Engineered a layered architecture .NET MVC e-commerce platform with robust database tracking, transactional inventory management, implemented Unit of Work patterns, and secure checkout/payment pipelines. (Stack: .NET Core, C#, MVC, SQL Server, Entity Framework)

### **URL Shortener — Full-Stack**

Built an optimized full-stack URL shortener utility, implementing low-latency server-side 301 redirection, collision resolution algorithms, and real-time click telemetry tracking. (Stack: Node.js, Express, MongoDB, TypeScript, REST API)

### **Educational Center Platform**

Created an academic operations platform using ASP.NET Core Razor Pages, featuring PageModel encapsulation, centralized management services for student progression tracking, and a secure administrative dashboard. (Stack: ASP.NET Core, C#, Razor Pages, SQL Server, Entity Framework)

### **LANGUAGES**

---

Arabic : Native • English : Professional Working
